

Ray Tracing

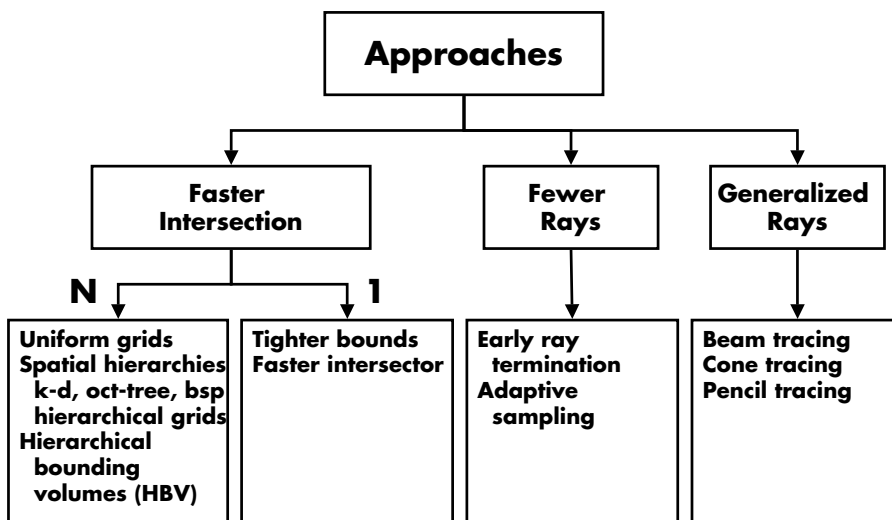

Ray Tracing 1

- Basic algorithm
- Ray-surface intersection (triangles, ...)

Ray Tracing 2

- Brute force $|I| \times |O|$
- Acceleration data structures

Ray Tracing Acceleration Techniques

Uniform Grids

Preprocess scene

1. Find bounding box

CS348B Lecture 3

Pat Hanrahan, Spring 2002

Uniform Grids

Preprocess scene

1. Find bounding box

2. Determine resolution

$$n^3 = d |O|$$

CS348B Lecture 3

Pat Hanrahan, Spring 2002

Uniform Grids

Preprocess scene

1. Find bounding box
2. Determine resolution

$$n^3 = d |O|$$

2. Place object in cell,
if object overlaps cell

CS348B Lecture 3

Pat Hanrahan, Spring 2002

Uniform Grids

Preprocess scene

1. Find bounding box
2. Determine resolution

$$n^3 = d |O|$$

3. Place object in cell,
if object overlaps cell
4. Check that object
intersects cell

CS348B Lecture 3

Pat Hanrahan, Spring 2002

Uniform Grids

Preprocess scene

Traverse grid

3D line - 3D-DDA

6-connected line

1st algorithm

CS348B Lecture 3

Pat Hanrahan, Spring 2002

Caveat: Overlap

Optimize for objects that overlap multiple cells

Caveat 1:

Intersection must be within bound

Caveat 2:

Redundant intersection tests

Mailboxes

- Assign each ray a number
- Object intersection cache (mailbox)
 - Store ray number
 - Intersection

CS348B Lecture 3

Pat Hanrahan, Spring 2002

Spatial Hierarchies

Leaf nodes corresponds unique regions in space

CS348B Lecture 3

Pat Hanrahan, Spring 2002

Spatial Hierarchies

Point Location by recursive search

CS348B Lecture 3

Pat Hanrahan, Spring 2002

Variations

kd-tree

oct-tree

bsp-tree

CS348B Lecture 3

Pat Hanrahan, Spring 2002

Creating Spatial Hierarchies

```

insert(node,prim) {
    if( overlap(node->bound,prim) )
        if( leaf(node) ) {
            if( node->nprims > MAXPRIMS
                && node->depth < MAXDEPTH ) {
                subdivide(node);
                foreach child in node
                    insert(child,prim)
            }
            else
                insertlist(node->prims,prim);
        }
        else
            foreach child in node
                insert(child,prim)
    }
}

```

// Typically MAXDEPTH=16, MAXPRIMS=2-8

CS348B Lecture 3

Pat Hanrahan, Spring 2002

Median Cut

Build hierarchy bottom-up
Choose direction and position carefully
Surface-area heuristic

CS348B Lecture 3

Pat Hanrahan, Spring 2002

Surface Area and Rays

Number of rays in a given direction that hit an object is proportional to its projected area

The total number of rays hitting an object is $4\pi\bar{A}$

Crofton's Theorem:

For a convex body $\bar{A} = \frac{S}{4}$

For example: sphere $S = 4\pi r^2$ $\bar{A} = A = \pi r^2$

CS348B Lecture 3

Pat Hanrahan, Spring 2002

Surface Area and Rays

The probability of a ray hitting an object that is completely inside a cell equals

$$\Pr[r \cap O] = \frac{S_o}{S_c}$$

CS348B Lecture 3

Pat Hanrahan, Spring 2002

Ray Traversal Algorithms

Recursive inorder traversal

Kaplan, Arvo, Jansen

Intersect(L, t_{\min} , t_{\max})

Intersect(L, t_{\min} , t^*)
Intersect(R, t^* , t_{\max})

Intersect(R, t_{\min} , t_{\max})

CS348B Lecture 3

Pat Hanrahan, Spring 2002

Hierarchical Grids

Good compromise preferred by many practitioners

CS348B Lecture 3

Pat Hanrahan, Spring 2002

Hierarchical Bounding Volumes

Create of tree of bounding volumes

Children are contained within parent

Creation preprocess

- From model hierarchy
- Automatic clustering

Search

```
intersect(node,ray,hits) {  
  if( intersectp(node->bound,ray)  
    if( leaf(node) )  
      intersect(node->prims,ray,hits)  
  else  
    for each child  
      intersect(child,ray,hits)  
}
```

CS348B Lecture 3

Pat Hanrahan, Spring 2002

Comparison

Time		Spheres	Rings	Tree
Uniform Grid	d=1	244	129	1517
	d=20	38	83	781
Hierarchical Grid		34	116	34

Theoretical Nugget 1

Computational geometry of ray shooting

1. Triangles (Pellegrini)

- Time: $O(\log n)$
- Space: $O(n^{5+\epsilon})$

2. Sphere (Guibas and Pellegrini)

- Time: $O(\log^2 n)$
- Space: $O(n^{5+\epsilon})$

CS348B Lecture 3

Pat Hanrahan, Spring 2002

Theoretical Nugget 2

Optical computer = Turing machine

Reif, Tygar, Yoshida

**Determining if a ray
Starting at y_0 arrives
at y_n is undecidable**

$$y = y + 1$$

$$y = -2 * y$$

$$\text{if}(y > 0)$$
