

# Texture / Image-Based Rendering

---

## Texture maps

- Surface color and transparency
- Environment and irradiance maps
- Reflectance maps
- Shadow maps
- Displacement and bump maps

## Level of detail hierarchy

# Texture Maps

---

## How is texture mapped to the surface?

- Dimensionality: 1D, 2D, 3D
- Texture coordinates  $(s,t)$ 
  - Surface parameters  $(u,v)$
  - Direction vectors: reflection  $R$ , normal  $N$ , halfway  $H$
  - Projection: cylinder
  - Developable surface: polyhedral net
  - Reparameterize a surface: old-fashion model decal

## What does texture control?

- Surface color and opacity
- Illumination functions: environment maps, shadow maps
- Reflection functions: reflectance maps
- Geometry: bump and displacement maps

# Classic History

---

**Catmull/Williams 1974 - basic idea**

**Blinn and Newell 1976 - basic idea, reflection maps**

**Blinn 1978 - bump mapping**

**Williams 1978, Reeves *et al.* 1987 - shadow maps**

**Smith 1980, Heckbert 1983 - texture mapped polygons**

**Williams 1983 - mipmaps**

**Miller and Hoffman 1984 - illumination and reflectance**

**Perlin 1985, Peachey 1985 - solid textures**

**Greene 1986 - environment maps/world projections**

**Akeley 1993 - Reality Engine**

**Light Field**

**BTF**

## Cubical Environment Map

---

- Easy to produce with rendering system
- Possible to produce from photographs
- "Uniform" resolution
- Simple texture coordinates calculation

CS348B Lecture 12

# Direction Maps

---

Many ways to map directions to images...

Methods:

- **Latitude-Longitude (Map Projections) [Newell and Blinn]**
  - Create by painting
- **Gazing Ball (N) [Miller and Hoffman]**
  - Create by photographing a reflective sphere
- **Fisheye Lens**
  - Standard camera lens
- **Cubical Environment Map (R)**
  - Create with a rendering program, photography...

Issues:

- **Non-linear mapping - expensive, curved lines**
- **Area distortion - spatially varying resolution**
- **Convert between maps using image warp**

# Shadow Mattes

---

```
UberLight( )
{
  Clip to near/far planes
  Clip to shape boundary
  foreach superelliptical blocker
    atten *= ...
  foreach cookie texture
    atten *= ...
  foreach slide texture
    color *= ...
  foreach noise texture
    atten, color *= ...
  foreach shadow map
    atten, color *= ...
  Calculate intensity fall-off
  Calculate beam distribution
}
```

Pat Hanrahan, Spring 2005

## Shadow Maps

---

Shadow maps = depth maps from light source

CS348B Lecture 12

Pat Hanrahan, Spring 2005

## Correct Shadow Maps

---

### Step 1:

Create z-buffer of scene as seen from light source

### Step 2.

Render scene as seen from the eye

For each light

Transform point into light coordinates

return  $(z_l < z_{\text{buffer}}[x_l][y_l]) ? 1 : 0$

## Displacement/Bump Mapping

$$\mathbf{P}(u, v)$$

$$\mathbf{S}(u, v) = \frac{\partial \mathbf{P}(u, v)}{\partial u} \quad \mathbf{T}(u, v) = \frac{\partial \mathbf{P}(u, v)}{\partial v}$$

$$\mathbf{N}(u, v) = \mathbf{S} \times \mathbf{T}$$

### ■ Displacement

$$\mathbf{P}'(u, v) = \mathbf{P}(u, v) + h(u, v)\mathbf{N}(u, v)$$

### ■ Perturbed normal

$$\begin{aligned} \mathbf{N}'(u, v) &= \mathbf{P}'_u \times \mathbf{P}'_v \\ &= \mathbf{N} + h_u(\mathbf{T} \times \mathbf{N}) + h_v(\mathbf{S} \times \mathbf{N}) \end{aligned}$$
