## Visualizing Anatomy

**A photographic depiction captures the exact appearance of the object as we actually see it**

**Subtle, complex details of coloration and texture are fully represented, with great accuracy**

Photograph of the right hip bone (lateral aspect)  
Johannes W. Rohen and Chihiro Yokochi.  
Color Atlas of Anatomy:  
A Photographic Study of the Human Body,  
Igaku-Shoin, 1993.

Labels in the drawing include: Ala of ilium, Int. lip of iliac crest, Intermediate line of iliac crest, Ext. lip of iliac crest, Tuberosity of ilium, Ala of ilium, Ant. gluteal line, Inf. gluteal line, Post. gluteal line, Tuberosity of gluteus maximus m., Post. sup. iliac spine, Post. inf. iliac spine, Greater sciatic notch, Border of acetabulum, Acetabular notch, Ischial spine, Lesser sciatic notch, Post. obturator tubercle, Body of ischium, Ischial tuberosity, Ramus of ischium, Ant. sup. iliac spine, Body of ilium, Ant. inf. iliac spine, Supracetabular groove, Lunate surface, Acetabular fossa, Pecten pubis (pectineal line), Obturator crest, Pubic tubercle, Inf. ramus of pubis, Ant. obturator tubercle, Obturator foramen.

**A drawing offers the possibility to clarify structural or conceptual information that may be difficult to perceive in even a very good photo.**

Color drawing of the same subject.  
Sobotta Atlas of Human Anatomy, 11th English edition, vol. 2, edited by Jochen Staubesand, translated and edited by Anna N. Taylor, Urban & Schwarzenberg, 1990.

## Photo vs. Drawing in Archaeology

James B. Porter. "Relief Monuments", in The Student's Guide to Archaeological Illustration, ed. Brian D. Dillon, Institute of Archaeology, University of California, Los Angeles, 1981

## Photo vs. Drawing in Archaeology

James B. Porter. "Relief Monuments", in  
[The Student's Guide to Archaeological Illustrating](#),  
Brian D. Dillon, ed., Institute of Archaeology,  
University of California, Los Angeles, 1981

## Photo vs. Drawing

---

**Hand-drawn illustrations are routinely used to emphasize important features that are difficult to capture in a photograph, while minimizing secondary detail**

**Drawings are also useful to portray information that cannot be captured or represented photographically, such as hidden surfaces**

FIG. 1. FOUR REPRESENTATIONS OF THE HANDS IN POSITION 1  
 (A) Photograph; (B) Shaded Drawing; (C) Line Drawing; (D) Cartoon

## Perception of the 3D configuration of familiar objects

Speed of imitation of position, in seconds (mean):

- 0.039 photo
- 0.044 shaded drawing
- 0.070 line drawing
- 0.046 cartoon

T. A. Ryan and Carol B. Schwartz,  
 "Speed of Perception as a Function of Mode of Representation",  
 American Journal of Psychology,  
 69, pp. 60-69, 1956.

FIG. 2. FOUR REPRESENTATIONS OF THE SWITCHES IN POSITION 1

## Perception of the 3D configuration of familiar objects

Speed of naming open switch, in seconds (mean)

- 0.690 photo
- 0.719 shaded drawing
- 1.169 line drawing
- 0.288 cartoon

T. A. Ryan and Carol B. Schwartz,  
 "Speed of Perception as a Function Mode of Representation",  
 American Journal of Psychology,  
 69, pp. 60-69, 1956.

FIG. 3. FOUR REPRESENTATIONS OF THE STEAM VALVES IN POSITION 1

Speed of stating  
stage of cycle,  
in seconds (mean):

- 0.235 photo
- 0.316 shaded drawing
- 0.375 line drawing
- 0.262 cartoon

T. A. Ryan and Carol B. Schwartz, "Speed of Perception as a Function of Mode of Representation", *American Journal of Psychology*, 69, pp. 60-69, 1956.

## Their Conclusion:

---

**Superiority of performance (photograph vs. drawing) varies with the application**

**Response times were consistently longest for the basic line drawing images**

# Study of Picture Preferences

## Realistic

Patent Ductus Arteriosus

Wedge Resection

Esophageal Fundoplication

K. Hirsch and D. A. McConathy, "Picture Preferences of Thoracic Surgeons", *Journal of BioCommunications*, Winter 1986, pp. 26-30.

# Study of Picture Preferences

## Semi-Schematic

Patent Ductus Arteriosus

Wedge Resection

Esophageal Fundoplication

K. Hirsch and D. A. McConathy, "Picture Preferences of Thoracic Surgeons", *Journal of BioCommunications*, Winter 1986, pp. 26-30.

# Study of Picture Preferences

## Schematic

Patent Ductus Arteriosus

Wedge Resection

Esophageal Fundoplication

K. Hirsch and D. A. McConathy, "Picture Preferences of Thoracic Surgeons", *Journal of BioCommunications*, Winter 1986, pp. 26-30.

## Results

---

Surgeons rated the 'schematic' representation least preferable; the 'semi-schematic' and 'realistic' representations were preferred in equivalent numbers.

**Lines**

## Classic Line Types

---

### Isoparametric

**Discontinuities**

**Boundaries**

**Silhouettes**

## Classic Line Types

---

- **Isoparametric lines**
- **Discontinuities: creases and self-intersections**
- **External and internal boundaries**
- **Silhouettes and contours and cusps**

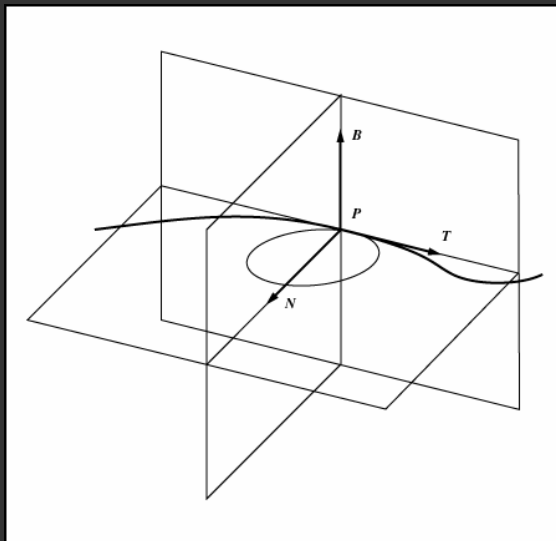

## Extended Line Types

---

- Principal directions and lines of curvature
- Parabolic lines
- Attached and unattached shadows
- Isoluminance and luminance extrema
- Highlights

## Space Curve

---

# Normal Curvature

---

# Principal Curvatures

---

Hilbert and Cohn-Vossen (1952)  
Geometry and the Imagination

## Gaussian Curvature

---

## Gaussian Curvature

---

$K_1$  = curvature in first principal direction

$K_2$  = curvature in second principal direction

Gaussian curvature:  $K = K_1 K_2$

Mean curvature:  $H = (K_1 + K_2) / 2$

$K > 0$  : elliptic, convex or concave

$K < 0$  : hyperbolic, saddle-shaped

$K = 0$  : parabolic, cylindrical or planar

## Artistic Inspiration

### Russell Drake's "single line system of shading"

- the flow of the shape is conveyed through the directions of the carefully drawn strokes
- multiple overlapping surfaces are displayed with clarity

*Lumbosacral and Sacro-iliac fusion* . Russell Drake, medical illustrator, Mayo Foundation, 1932.

### V. Interrante

Surface grid texture  
( aligned with the principal directions )

Solid grid texture  
( aligned with the coordinate axes )

## Principal Directions

---

Klein bottle

From Hertzmann and Zorin

## Occluding Contour

---

From Koenderink, *Solid Shape*

## Definitions [Koenderink]

---

**Rim** – the closed space curve on the shape that makes up the silhouette; the space curve is smooth and has no discontinuities except when the surface is discontinuous; the rim is not a plane curve!

**Contour** – the projection of the rim; the projection may have singularities

**Silhouette** – the visible part of the contour

## Generic Position

---

1. Perturbed ray meets in two points
2. Enter, leave, enter: cusp or contour ends
3. Self-intersection

**Good views are in generic position**

# Koenderink

---

$K_t$  = tangential curvature

$K_r$  = radial curvature (along the line of sight)

$K_r K_t = K$  (the Gaussian Curvature)

- Cannot see concave regions of the surface
- Convex  $K_t > 0$ , convex region of the surface
- Concave  $K_t < 0$ , hyperbolic region of the surface
- Inflection points along parabolic lines

# Cusp

---

# Koenderink

---

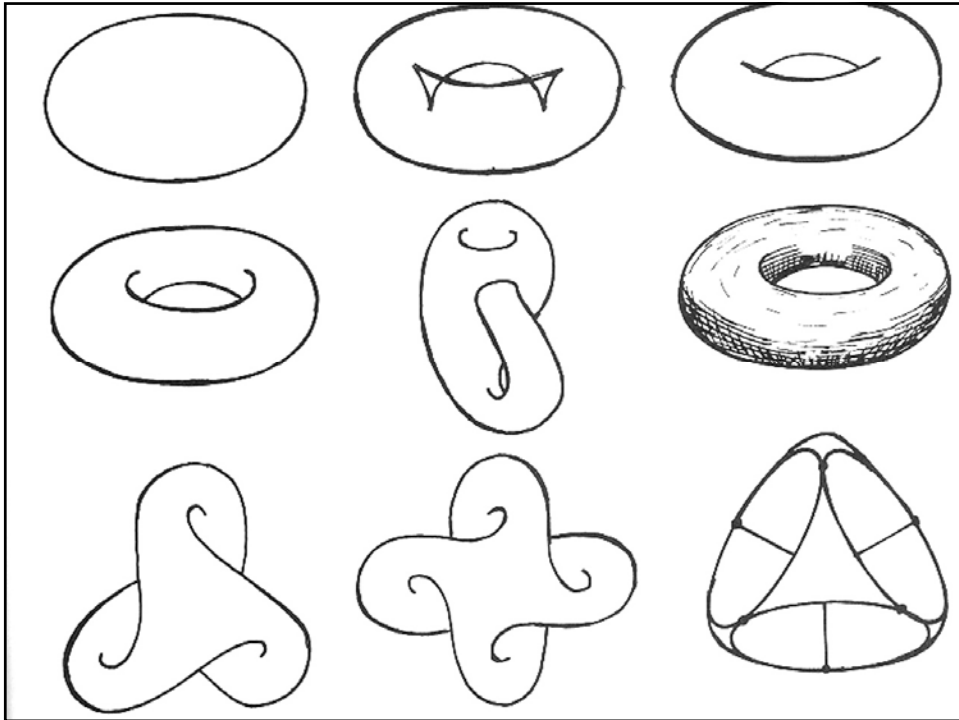

The visible end of a contour must lie on a hyperbolic surface

At the end point, the direction of view is along the asymptote (0 curvature)

At the end point, the contour is concave

Figure 6. Picasso: *Nu couché* 1920.

DeCarlo, Finkelstein, Rusinkiewicz, Santella, Suggestive contours for conveying shape, SIGGRAPH 2003

## Parabolic Lines

---

Felix Klein Apollo

## **Parabolic Lines**

---

- 1. Segmentation of the object into convex, concave and saddle-shaped regions**
- 2. Inflection points of the visual contour**
- 3. Changes of topology of the contour with viewpoint changes**
- 4. Qualitative structure of the illuminance distribution**
- 5. Loci that create and annihilate highlights**

## **Graphical Conventions**

# Types of Lines

Haloed lines

Taper near t-junction (See Dooley and Cohen)

Eye-lashing (Guild)

Sketchiness (Strothotte)

Conventions in engineering drawing

Martin, Technical Illustration

Dooley and Cohen

## Line Drawing Conventions

**Single weight**

**Two weights**

**Distance weighting**

**From Martin (reproduced in Gooch and Gooch)**

# Highlighting

## Summary

---

**Illustrations often better than photographs**

- Enhance important features
- Deemphasize unimportant detail

**Grand challenge**

- Produce a good line drawing
- What lines, not just how to draw lines

## Edge Detectors
